

Q10 Revitalizing Day Cream contains Co-enzyme Q10, Pycnogenol® and Jojoba oil in a pH balanced, anti-ageing formulation to help prevent the appearance of fine lines and wrinkles.

Dermatological studies have shown that Co-enzyme Q10 could reduce the depth of fine lines and wrinkles, with improvements visible within 6-8 weeks.

Co-enzyme Q10 and Pycnogenol® are powerful antioxidants at the skin's surface. This results in the reduction of free radicals and toxins, thus making the skin feel soft, smooth and revitalised.

Q10 Revitalizing Day Cream is for all skin types and may be applied under makeup.
